

# Judging Criteria – C3 Hackathon

## Execution ( 5 pts )

- Does the app work?
- Does it accomplish its goal?
- Does it work as is, or does it require additional resources (code or data?)
- Complexity can influence this, but isn't a determining factor. A simple app which does what it needs to do to be useful will score just as highly as a complex app.
- How easy is the app to use?
- How does the app look and feel?

## Impact ( 5 pts )

- Would people use this?
- How much would it affect users who did?
- Does the app have follow-up options or growth potential?
- Apps don't have to have a specific money making model to have impact, but having business potential would be one method of demonstrating impact.

## Innovation ( 5 pts )

- Is this a creative solution to a problem?
- Is this a new solution to a problem?
- Does the app innovate on...
  - design
  - user interactions
  - technical solutions etc....

## Judges Discretion (1 pt)

- For tiebreaks the judges can use a discretionary point.
